

This is a modal that opens up on click of the add action button

This is writing area. You can write your task here. This can be left empty as well. Once you press enter it will create a ticket.

These are ticket color options. By default colour of ticket is black. You can choose any colour. If no color is chosen a black ticket is created.

#mbDyRw

This is a sample ticket

#Sby0h7

This is a sample ticket

#bBSnlE

This is a sample ticket

We can have multiple tickets of different colours at the same time if no filter is selected

Here pink filter
is selected

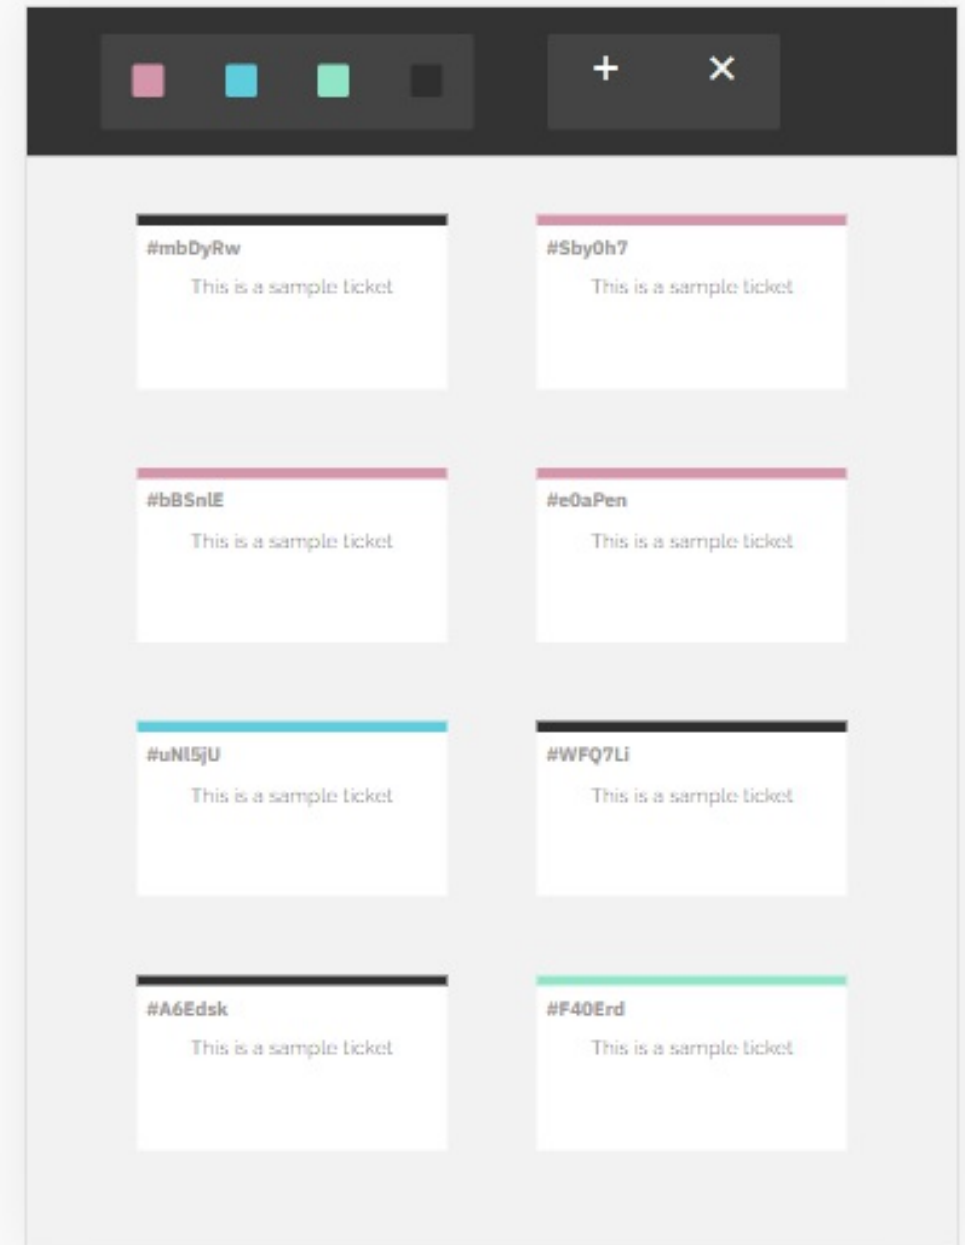

We can get a specific color
tickets by selecting the colour
filter.

PIXEL 2 XL

The app is responsive in mobile, tab and desktop screen sizes.

IPAD

1 - The whole app has a parent called container and inside this we have 2 sections, navbar and grid.

div.container ←

div.navbar ←

div.grid ←

div.pink-color-btn

div.blue-color-btn

div.green-color-btn

div.black-color-btn

4- Inside filter divs we have example-color-btn divs. These divs were made in this manner so that the outer div can be used to show active filter

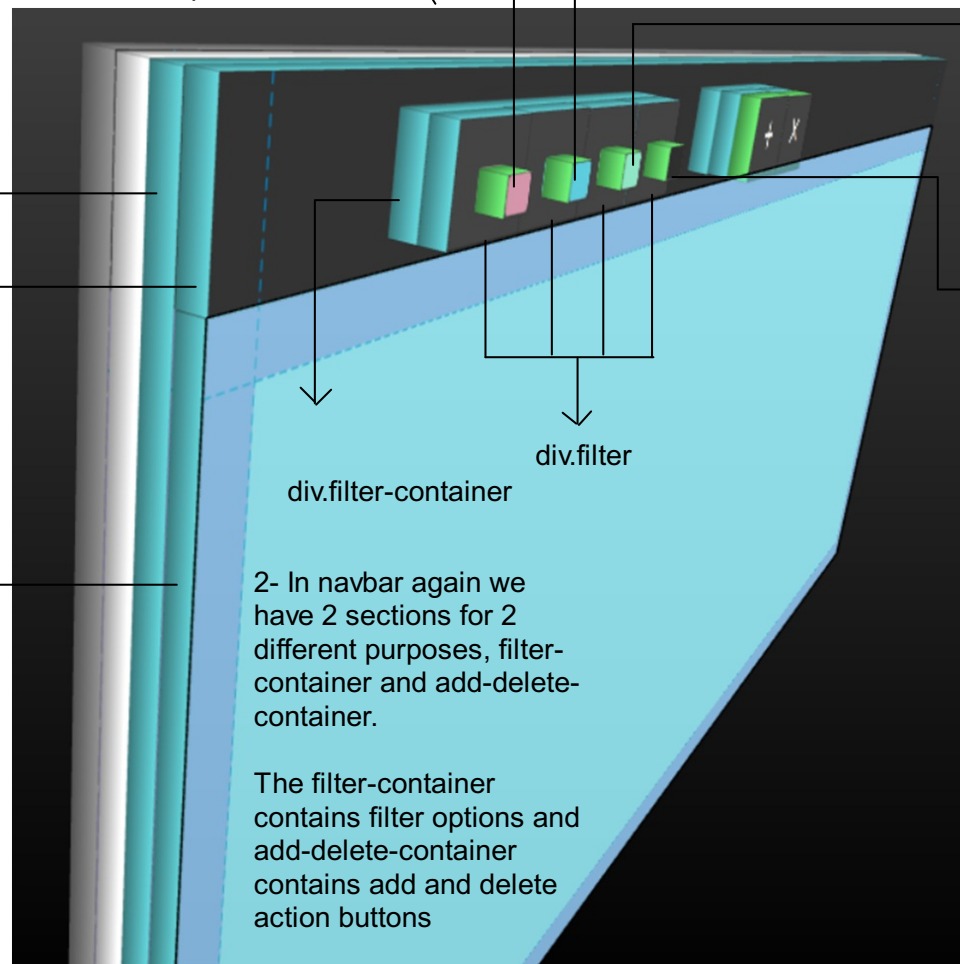

div.filter

div.filter-container

2- In navbar again we have 2 sections for 2 different purposes, filter-container and add-delete-container.

The filter-container contains filter options and add-delete-container contains add and delete action buttons

3- Inside filter-container we have 4 filter divs. The filter-container has been flexed so that all filters can come in a horizontal format. Same goes for add-delete container.

div.add

div.delete

div.add-delete-container

div.material-icons.action-btn

1- Inside the add-delete-container we have add div and delete div. Inside each of these divs we have a material-icon div for icon. The add and delete div were made for proper arrangement of icons
